BIKE PARKING STAND – 4 BICYCLE

A Bicycle Parking Stand is a wonderful way to keep bikes neat and tidy. Mainly used when security is not a major issue. These are often put in garages, in commercial or industrial premises. Many bicycle retailers use our bike parking racks for shop displays.

INSTALLATION

Installing the stand is a simple matter of deciding whether you wish to install them straight or offset to one side as in the attached picture. Installing them at an offset angle can be convenient, but our suggestion is to install them at 90 degrees in most circumstances as it maximises the space for each bicycle.

PHYSICAL DESCRIPTION

A 4 bike parking rack is 121 cm in length and holds four bicycles. Each stand is spaced 37 cm apart. Holes are provided to enable you to anchor the bike parking racks to the ground with dynabolts if required.

WARRANTY

Importantly our bike parking racks are made to last. They are made from 12mm steel and will provide you with years of service. As they are fully welded there are no points of weakness. And even if something should to go wrong they are covered by a 10 year replacement warranty.

FREIGHT

Freight for your purchase is free to any of the major metropolitan areas of Australia. The main areas where freight may be a problem is WA (except Perth), NT and some parts of outback SA, QLD and NSW. We can ship to more remote locations but there is likely to be a freight charge.
